

# EMC EmailXtender Archive Edition for Microsoft Exchange and Lotus Notes/Domino

## Reducing the cost of storage while increasing user productivity

- The Big Picture**
- Lowers storage costs by eliminating duplicate messages and compressing data in a central e-mail archive
  - Improves e-mail server performance by decreasing the load on the e-mail server
  - Reduces backup and recovery times of e-mail servers
  - Provides an affordable e-mail management solution

Managing the explosive growth of e-mail has become a time-consuming, complex task. E-mail users demand infinite capacity at the desktop while administrators struggle to deliver a cost-effective messaging management solution.

EMC EmailXtender<sup>®</sup> Archive Edition is an e-mail archiving solution that helps organizations reduce storage costs and increase message server performance by automatically migrating e-mail messages and attachments into a centralized message archive, compressing and removing duplicate messages.

### Lower storage costs

EmailXtender Archive Edition helps Microsoft Exchange and Lotus Domino environments reduce e-mail-related storage costs by moving data off the mail server to a secure archive server. Moving messages and attachments from the mail server to an archival database decreases the burden on the mail server and improves performance. EmailXtender Archive Edition eliminates duplicate messages while retaining a record of all users who sent or were copied on a message. It then compresses the data, further reducing the size of the archive. The result is a compact message archive that is easy to manage and maximizes storage utilization.

---

---

## Increase user productivity

EmailXtender Archive Edition improves user productivity by improving the performance of the mail server. Administrators can use its flexible archiving policy to automatically move messages to the archive based on message age, reducing server load.

Shortcuts enable transparent access to archived messages while decreasing the size of the message server—providing an "infinite" mailbox capacity for the user. Shortcutting replaces a message in the user mailbox with a stub, reducing storage. Users can access the message from Microsoft Outlook or Lotus Notes as if it were still in their mailbox.

## Affordable message management

EmailXtender Archive Edition is the perfect solution for companies that want to contain the exploding growth of e-mail messages, but do not need the compliance and legal discovery features of EmailXtender Full Release. EmailXtender Archive Edition delivers outstanding value in a cost-effective package. It provides a single, centrally managed archive that stores all relevant e-mail, attachments, and metadata, including aliases and distribution lists. Additionally, the product can eliminate unmanaged PST files by automatically locating and archiving them from the user desktop. EmailXtender Archive Edition integrates easily with your native address book, reducing time and complexity during installation and ongoing maintenance. It also provides powerful administrator search capabilities and system health check tools to ensure optimal operation. Administrators can search the EmailXtender archive through a native Notes/Outlook interface or over the Web.

## Platform compatibility

EmailXtender Archive Edition is compatible with Microsoft Exchange and Lotus Domino. It provides native integration with Microsoft Exchange Global Address List (GAL) and Lotus Domino Notes Address Book (NAB). EmailXtender Archive Edition can be used to assist in the migration from Microsoft Exchange 5.5 or 2000 to Exchange 2003. It can also assist in Lotus Domino migrations from Domino 5.0.2a – 5.0.13, 6.0 – 6.0.4, and 6.5.1 – 6.5.4.

## The messaging product family

The EMC messaging product family consists of EmailXtender, EmailXtender Archive Edition, and EmailXaminer. EmailXtender is an e-mail archiving solution that enables organizations to retain and manage e-mail and instant messages as a record of business and achieve regulatory compliance, adhere to corporate policies, and support legal discovery. EmailXaminer is an e-mail content monitoring and supervision solution that helps companies achieve compliance with regulations such as NASD 3010.

## Take the next step

You owe it to your business to investigate e-mail archive solutions from EMC. Change e-mail management from a necessary chore to a competitive advantage.
